

KF-mini QC

Coping Center

The HSK 32 quick change system for different profiles

Tool change in a few seconds

Unlike the standard machine, the KF-mini QC is equipped with high frequency spindles HSK C32 and a frequency converter. This version offers several advantages:

- Quick change of tools without readjustment to the new profile geometry
- Accurate centering and positioning on the spindles
- Absolute repeatability upon tool change

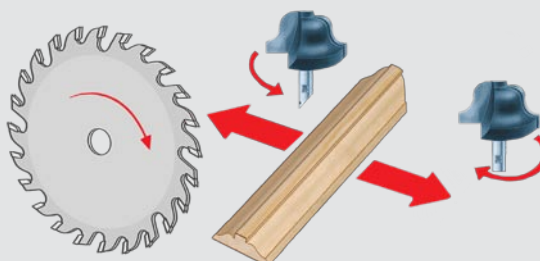

With the rapidly adjustable, optional swivelling fence the machine can also end scribe bars neatly for angle joints between -45° and $+45^\circ$.

An optional cross cut saw with a fence can be added to the machine for cutting the bars to the required length.

Tear free end scribing of glazing bars

The main feature of this machine are the two high-speed milling spindles, rotating in opposite directions. The machine mills from the left and from the right beyond the center of the workpiece. The result is a perfect, tear free coping even of bars which are already profiled in the long side.
